

Changes in the States of Matter

Melting: When a substance changes from a solid state to a liquid state, usually due to exposure to heat, it is called melting.

Freezing: When a substance changes from a liquid state to a solid state, usually due to a reduction in temperature, it is called freezing.

The following images show changes in states of matter. Observe the changes, identify if they have been caused by melting or freezing, and write if they are reversible or not.
