Rock Cycle

Match each process to its definition.

1) weathering   ●   ●   the wearing down and
                                            transportation of rock fragments by
                                            wind and water

2) e...   ●   a rock turning into its liquid form or

3) c...   ... by

4) ce...   d

5) m...   ral
                                            agents, with no movement involved

6) cooling   ●   ●   structural reorganization of a rock
                                            under great heat and pressure

7) metamorphism ●   ●   rock sediments stacking up and
                                            becoming tightly packed
