

# Representing Data using Circle Graph *Answer Key*

A restaurant tracks the number of orders for different types of food for one week. Create a circle graph to represent the distribution of orders for each type of food.  
(Drawings may vary)

Types of Foods	Number of Orders	Central Angles
Burgers	85	<b>153°</b>
Pizzas	50	<b>90°</b>
Salads	30	<b>54°</b>
Sandwiches	25	<b>45°</b>
Tacos	10	<b>18°</b>
Total	<b>200</b>	<b>360°</b>
